

CURRICULUM VITAE

June 24, 2020

Name: Fumitaka Sato, Ph.D.

Birth Date: January 8, 1978

Nationality: Japan

Department of Microbiology,
Kindai University Faculty of Medicine
377-2 Ohnohigashi, Osakasayama, Osaka 589-8511, Japan
Office Phone: +81-72-366-0221 (x-3257)
Email: fsato@med.kindai.ac.jp

Education:

April 1, 1999-March 31, 2003: Department of Sciences,
Yokohama City University,
Yokohama, Kanagawa, Japan,
B.S.

April 1, 2003-March 31, 2005: Department of Immunology,
Yokohama City University Graduate School of Medicine,
Yokohama, Kanagawa, Japan,
M.S.

April 1, 2005-March 31, 2009: Department of Immunology,
Yokohama City University Graduate School of Medicine,
Yokohama, Kanagawa, Japan,
Ph.D.

Employments:

April 1, 2009-August 31, 2009: Department of Neurosurgery,
Yokohama City University School of Medicine,
Yokohama, Kanagawa, Japan,
Postdoctoral fellow

September 1, 2009-March 31, 2016: Department of Microbiology and Immunology,
Louisiana State University Health Sciences Center-Shreveport,
Shreveport, Louisiana, USA,
Postdoctoral fellow

April 1, 2016-present: Department of Microbiology,
Kindai University Faculty of Medicine,
Osakasayama, Osaka, Japan,
Assistant Professor

Research Grants (Principal Investigator):

1. The Fellowship from the Malcolm Feist Cardiovascular Research Endowment, September 1, 2011-August 31, 2015 (\$225,000). “Regulatory role of natural killer T (NKT) cells in cardiovirus-induced myocarditis”
2. The Science Research Promotion Fund from the Promotion and Mutual Aid Corporation for Private Schools of Japan, April 1, 2017-March 31, 2018 (\$5,000). “Identification of the phase-specific cardiac biomarkers and blood surrogate markers in a viral model of myocarditis”
3. The Grant-in-Aid for Young Scientists (B) from the Japan Society for the Promotion of Science KAKENHI, April-1, 2017-March 31, 2020 (\$40,000). “Identification of biomarkers in animal models of progressive multiple sclerosis using RNA sequencing”
4. The Faculty Assistance and Development Research Grant from the Kindai University Research Enhancement Grant, April 1, 2017-March 31, 2018 (\$4,000). “Identification of blood surrogate markers in autoimmune models of progressive multiple sclerosis”
5. The Grant-in-Aid for Scientific Research (C) from the Japan Society for the Promotion of Science KAKENHI, April-1, 2020-March 31, 2023 (\$43,000). “Novel communication between Th17 and CD8⁺ T cells and combination therapy in animal models of multiple sclerosis”

Awards in Professional Societies:

1. 2011, Consortium of Multiple Sclerosis Centers (CMSC) Scholarship Award
2. 2012, American Heart Association (AHA) Basic Cardiovascular Sciences (BCVS) Travel Award
3. 2014, Japanese Society of Neurology (JSN) Travel Award
4. 2015, American Society for Virology (ASV) Medical Virology Club Travel Award
5. 2017, Sendai Conference Travel Award
6. 2018, Sendai Conference Travel Award

Awards in Affiliations:

1. 2017, Kindai University Faculty of Medicine Best Oral Presentation Award

Reviewer experiences:

1. Ad Hoc Reviewer for the *Journal of Multiple Sclerosis*
2. Ad Hoc Reviewer for the *Journal of Visualized Experiments (JoVE)*
3. Ad Hoc Reviewer for *Pathophysiology*
4. Ad Hoc Reviewer for *Frontiers in Cellular Neuroscience*

Invited lectures (international):

1. Seminar series, Center of Excellence for Arthritis and Rheumatology, Louisiana State University Health Sciences Center, Autoimmunity Discussion Group, "The role of resveratrol, a red wine component, on immune-mediated experimental autoimmune encephalomyelitis (EAE)", Shreveport, Louisiana, USA, November 13, 2009.

2. The 55th Annual Meeting of the Japanese Society of Neurology (JSN), “Autoimmune and viral models of MS in Th2-biased GATA3 transgenic mice”, Fukuoka, Fukuoka, Japan, May 21-24 (May 22), 2014.
3. Sendai Conference 2017, “An RNA virus triggers inflammatory demyelination in the central nervous system by activating anti-myelin autoimmune T cells”, Sendai, Miyagi, Japan, July 8, 2017.
4. Sendai Conference 2018, “Potential prebiotic β -glucan curdlan differently alters viral versus autoimmune models of MS”, Sendai, Miyagi, Japan, July 14, 2018.
5. Sendai Conference 2019, “Altered microbiota could affect distinct CNS immune gene expressions in the Theiler’s virus model of MS”, Sendai, Miyagi, Japan, June 29, 2019.

Invited lectures (domestic):

1. Seminar series, Department of Immunology, Yokohama City University School of medicine, “Demyelination and axonal degeneration in animal models of multiple sclerosis: Outside-In model and Inside-Out model”, Yokohama, Kanagawa, Japan, February 9, 2010.

Oral presentations (international):

1. The American Society for Microbiology (ASM) South Central Branch Annual Meeting, “Role of Toll-like receptor (TLR) 4 in a viral model for myocarditis”, Monroe, Louisiana, USA, December 2-3 (December 2), 2011.
2. The 34th Annual Meeting of the American Society for Virology (ASV), “Th1 transcription factor T-bet, but not Th2 transcription factor GATA3, overexpression is detrimental in a neurotropic viral infection in the CNS”, London, Ontario, Canada, July 11-15 (July 13), 2015.

Oral presentations (domestic):

1. The 23rd Annual Meeting of the Japanese Society for Neuroimmunology (JSNI), “Effect of curdlan, a Th17-cell inducer, in a viral model for multiple sclerosis: Theiler’s virus infection”, Shinjuku, Tokyo, Japan, September 15-17 (September 17), 2011.
2. The 27th Annual Meeting of the Japan Cytometry Society (JCS), “Roles of regulatory T cells in the Theiler’s murine encephalomyelitis virus-induced demyelination model”, Kobe, Hyogo, Japan, June 10-11 (June 10), 2017.
3. The 76th Annual Meeting of Kindai University Faculty of Medicine, “Viral infections act as adjuvant, accelerating spontaneous EAE”, Osakasayama, Osaka, Japan, July 19, 2017.
4. The 29th Annual Meeting of the Japanese Society for Neuroimmunology (JSNI), “Overexpression of the transcription factor T-bet exacerbates neurotropic viral infection”, Sapporo, Hokkaido, Japan, October 6-7 (October 7), 2017.
5. The 46th Annual Meeting of the Japanese Society for Immunology (JSI), “Protective and detrimental effects of curdlan, a Th17 cell inducer, in immune-mediated demyelination induced by a neurotropic viral infection”, Sendai, Miyagi, Japan, December 12-14 (December 12), 2017.
6. The 23rd Annual Meeting of the Japanese Society for Neuroinfectious Diseases (JSND), “Overexpression of the transcription factor T-bet renders resistant C57BL/6 mice lethal in a neurotropic viral infection”, Edogawa-ku, Tokyo, Japan, October 19-20 (October 19), 2018.
7. The 66th Annual Meeting of the Japanese Society for Virology (JSV), “Theiler’s virus-induced myocarditis model with acute viral replication, subacute T cell infiltration and chronic fibrosis in the heart”, Kyoto, Kyoto, Japan, October 28-30 (October 29), 2018.

8. The 47th Annual Meeting of the Japanese Society for Immunology (JSI), “TLR4 exacerbates a novel model of myocarditis induced with a picornavirus”, Fukuoka, Fukuoka, Japan, December 10-12 (December 12), 2018.
9. The 67th Annual Meeting of the Japanese Society for Virology (JSV), “Alteration of microbiota and immune gene expressions in the central nervous system in a picornavirus-induced acute myelitis model”, Edogawa-ku, Tokyo, Japan, October 29-31 (October 31), 2019.

Abstracts (international):

1. **Sato F.**, Tamura C., Yamamiya S., Nakazawa M., Minami M. The effect of inhaled antigen sensitization during the acute phase of influenza A viral infection on pulmonary dendritic cells. The 93rd Annual Meeting of the American Association of Immunologists (AAI), 2006, Boston, Massachusetts, USA. Poster.

BIBLIOGRAPHY

Biography:

Fumitaka Sato obtained his Ph.D. degree from Yokohama City University Graduate School of Medicine, Yokohama, Japan, in 2009. After that, he worked in the Department of Microbiology & Immunology at Louisiana State University Health Sciences Center-Shreveport, Louisiana, USA, as a postdoctoral fellow for 7 years. Since April 1st, 2016, he has been working in the Department of Microbiology at Kindai University Faculty of Medicine, Osaka, Japan, as an assistant professor in Dr. Tsunoda's laboratory.

Research Interests:

My research has been aimed at elucidating the pathogenesis of viral infections and autoimmune disorders in the central nervous system (CNS), using viral and autoimmune models of multiple sclerosis (MS): Theiler's murine encephalomyelitis virus (TMEV) infection and experimental autoimmune encephalomyelitis (EAE). I have studied both host immune responses and pathogens (viruses), *in vivo* and *in vitro*, using virological, immunological, and neuropathological methods. I have investigated the roles of axonal degeneration, helper T (Th) 1 cells, Th2 cells, Th17 cells, regulatory T cells (Tregs), and natural killer T (NKT) cells in the two models. I have established novel transgenic mice overexpressing transcription factors, T-bet, Gata3, and ROR γ t, which are associated with differentiation into Th1, Th2, or Th17 cells, respectively. The established transgenic mice will be used to elucidate the roles of the three Th cell subsets in deciphering how the Th cells interact and contribute to the pathogenesis of the two models. I have also investigated a model of myocarditis induced with TMEV, using the transgenic mice, virologically, immunologically, and histologically.
